

## Benchmark your cybersecurity defenses against international standards

Cybersecurity is a very large area that requires the sharing of experience and knowledge of professionals from all around the world. It is critically important to work with internationally recognized standards to benchmark your current security posture.

Kyos Security Essentials (KSE) is a review of your cybersecurity protection based on the CIS Controls™, a framework maintained by international experts coming from a wide range of sectors. A KSE review will help you to:

### Measure your preparedness

Based on internationally recognized framework, we assess the level and maturity of your security controls.

### Take informed decisions

We will assess the impact of your current initiatives and identify key challenges to help you invest where your real risks are.

### Identify gaps and areas of risk

Our review will shed light on possible areas with inadequate or missing controls for your consideration.

### Drive your security transformation

The review will support you to prepare a roadmap, prioritize and initiate security projects.

## Select your package according to your company profile

Package	Basic	Medium	Full
CIS Implementation group	Group 1	Group 2	Group 3
Level of your company in security	An organization with limited resources and cybersecurity expertise	An organization with moderate resources and cybersecurity expertise	An organization with significant resources and cybersecurity expertise
Prices of the review			
Review	5'800.00 CHF	9'800.00 CHF	12'500.00 CHF
Update of the review the next year	2'320.00 CHF	3'920.00 CHF	5'000.00 CHF

## CIS Implementation Groups

The Center for Internet Security (CIS) Controls are developed by a vast international community of IT experts who apply their first-hand experience as cyber defenders to create these globally accepted security best practices.

The CIS Controls are informed by actual attacks and effective defenses and reflect the combined knowledge of experts from every part of the ecosystem (companies, governments, individuals).

## Outcome

As a result of the KSE review we will deliver a report with recommendations. We will spend time with you to discuss your roadmap for cybersecurity transformation based on your priorities and possible risk reduction strategies.

## Timeline

- Kick off meeting,
- Interview with key members of your team,
- Analysis of the results and report drafting,
- Report presentation and discussion with the Kyos consultant.

## Requirements

- IT correspondent(s) with enough knowledge of your IT infrastructure, operations, projects and priorities,
- Staff who are responsible for the process of an employee's onboarding and exits,
- Access to relevant documentation.

## Kyos Security Essentials in brief ...

- Continuously improve your cyber defenses by proactively managing your risks
- Get a decision-supporting tool
- Benefit from action sets adapted to your organization
- Align to international standards
- Use a framework which is regularly updated from incidents identified by the security industry
